

# Orchestral strings. The ProjectSAM way.

## **Originele copy:**

*"Give us a dedicated string library with the ProjectSAM sound."*

For over 20 years, one desire has echoed louder than any other. This desire has now become reality.

## **New copy:**

Experience a world-class collection of premium string recordings that responds to you – the composer. Create fluid lines and natural orchestrations thanks to intelligent musical features such as Adaptive Phrasing and The Arranger. All of this infused with the unmistakable ProjectSAM sound – warm, human, and distinctly European.

# **A new chapter in orchestral sampling.**

With the launch of the Lineage Series, we began redefining what modern orchestral libraries could be. Our ambition was clear: craft a world-class collection of premium string recordings and redesign the way they respond, so they can truly serve the composer.

For two years, we recorded, refined, and reimagined. Every detail was shaped around a single question: how can a virtual orchestra feel less programmed and more alive?

All of this we infused with the unmistakable ProjectSAM sound – warm, human, and distinctly European.

# Effortless realism

## Smart Lookahead

Smart Lookahead is the foundation of our intelligent performance system. By analyzing your performance just before it sounds, our engine can respond musically instead of mechanically, delivering dramatically improved realism and unlocking powerful performance features.

Fluid legato, natural runs, and organic phrasing – all unfolding seamlessly as you play. Thanks to Smart Lookahead.

## Adaptive Phrasing

For Pandora and Lineage Percussion, we developed Adaptive Sync. With Lineage Strings, we're introducing Adaptive Phrasing, bringing the same time-saving concept to articulations.

Adaptive Phrasing turns a single articulation into a flexible performance tool. By tracking your note lengths, speed, and repetition, it automatically selects the most appropriate articulation for each musical moment. The result is phrasing that follows your performance and keeps lines sounding musical and intentional – without constant articulation switching.

Need full control? Simply hold a keyswitch to force any articulation at any time, like pizzicato.

## Intelligent Arranging

The Lineage Strings Arranger automatically orchestrates your performance across Violin I, Violin II, Viola, Cello, and Bass, creating authentic string ensemble voicings with a single performance.

You can fully customize how each section behaves – but what truly sets the Arranger apart is its intelligent *automatic* mode, configurable per instrument.

Play a chord, and the engine distributes the notes naturally across the ensemble. If certain sections are locked to specific roles (e.g. the top note), the remaining instruments are automatically arranged around them, just like a real orchestrator would do.

Beautifully balanced, realistic ensemble writing – without manually splitting parts or juggling MIDI tracks.

## **Polyphonic legato**

Lineage Strings offers polyphonic legato, which intelligently tracks and handles voices, allowing multiple legato lines to flow at once.

Instead of thinking in terms of samples, you can think in terms of music – and simply play.

### **Short version:**

Lineage Strings intelligently tracks voices, allowing multiple legato lines to flow at once. Allowing you to focus on the music.

## **Precision control**

Lineage Strings gives you direct control over ensemble tightness. From loose and natural to tight and immediate. Loose settings preserve the natural bloom of the players, while tighter settings deliver focused, punchy articulation.

And with Smart Lookahead enabled, even loose performances are automatically compensated: your musical timing stays locked to the grid while the ensemble keeps its human feel.

### **Short version:**

Take direct control over the timing of the string section. Go for a focused, punchy sound or for a looser feel, preserving the natural bloom of the players.

## **Automatic vibrato**

Add subtle, musical motion to your performance by automatically shaping vibrato based on your dynamics and phrasing.

This doesn't replace your own automation – simply touch your controller and automatic vibrato is temporarily disabled.

The result is smoother phrasing, more emotional sustain, and performances that feel played, not programmed.

**Short version:**

Add subtle, musical motion to your performance by automatically shaping vibrato based on your dynamics and phrasing.

## **Full bowing control**

Lineage Strings gives you precise control over string bowing. Down and up bows can alternate automatically, be set explicitly, or be overridden on the fly – enabling more natural phrasing.

Bowing direction resets intelligently when a new phrase or downbeat is detected, keeping your rhythmic patterns fluid and musical.

**Short version:**

Lineage Strings offers dedicated down and up bow performances. These can alternate automatically, be set explicitly, or be overridden mid-phrase – enabling more natural phrasing.

## **Accessibility**

Lineage Strings supports both NKS1 and NKS2 standards, offering direct access to all essential features and parameters through controllers like Complete Kontrol.

## **The Sound**

Recorded in the renowned hall of the Symphobia sessions, Lineage Strings expands the ProjectSAM universe with depth and detail. The close mics offer you nuance, the stage mics warmth, and the ambient mics depth. Blend them together, use them separately, or choose the premixed set for a ready-made balance.

## **Free Edition**

Try out Lineage Strings for yourself! The Free Edition allows you to demo the Arranger with a beautiful staccato set covering all five string sections in a premixed microphone set. Experience the sound and musicality of Lineage Strings and download the Free Edition today!

### **Adaptive Phrasing copy voor in de zwarte balk met feature iconen onderin.**

Intelligent, automatic articulation matching based on your phrasing and performance.

### **Product card**

Orchestral strings that respond to you. Effortlessly realistic, distinctly European.
